

ABSTRACT

2 A table saw apparatus including and extendable table is provided. The table saw
3 also a rip fence with a constant alignment spring finger to ensure alignment at all times
4 between the rip fence and the table saw blade. The table saw includes a self-adjusting rip
5 fence scale associated with the extending portion of the table. The table includes a self-
6 aligning blade guard that, once adjusted a first time, ensures alignment between the blade
7 guard and the blade on any subsequent installations of the guard. The table saw also
8 includes a novel cradle assembly for elevating and beveling the blade.
